

# Cold Chain Packaging Solutions Leader

**DIRECT TO/FROM PATIENT**

## COLD CHAIN ISN'T ALWAYS COMPLEX

Whether facilitating a decentralized clinical trial or collecting samples from a patient in his or her home, the idea of putting cold chain responsibilities in the hands of someone not trained in temperature control is daunting. Peli BioThermal's push-button temperature controlled packaging solutions require no conditioning and make cold chain accessible to patients and untrained medical professionals. Healthcare is changing with a growing drive for convenience and Peli BioThermal's easy-to-use temperature controlled packaging makes at-home care accessible to patients.

Peli BioThermal's single-use and reusable refrigerated shippers are easy to use at remote sites. Innovative NanoCool™ shippers require no sourcing of gel coolants or conditioning, and they weigh significantly less than shippers that use phase change material. Just one touch of a button activates the cooling process for refrigerated samples, bringing a room temperature sample slowly to 2-8 degrees Celsius.

### Sustainability

Rent. Reuse. Recycle. We're on a journey to protect our environment and our planet one package at a time.

### Innovation

Our team thrives in the area between problem and solutions to develop cold chain packaging innovation.

### Reliability

Our customers trust us with their most valuable, health-giving and life-saving products.

**BIOThERMAL™**

# Thermal Packaging Solutions on a Global Scale

Peli BioThermal's innovative single-use and reusable thermal packaging products are used by leading global life science industry companies and organizations in pharmaceuticals, biotech, laboratory, diagnostics, and military/government sectors to protect and safely transport their most critical temperature-sensitive tissues, biologics, diagnostic, devices and vaccines. We offer the most diverse and trusted selection of cold chain packaging solutions, worldwide manufacturing and service centers staffed by cold chain engineering experts and provide an easy-to-use, web-based asset management service that allows organizations to track individual shipments from start to finish while setting up automated reminders for key logistics processes.

## PERFORMANCE YOU CAN DEPEND ON

All Peli BioThermal products are qualified against the highest standards, including the ISTA 7D standard.

### SINGLE USE

#### PARCEL

DeepFreeze™

NanoCool™

Shuttle™

### REUSABLE

#### PARCEL

Crêdo ProMed™
